

How To Disable Multi-Factor Authentication (MFA)

Last Modified on 06/20/2023 2:00 pm PDT

Click on the **down arrow** at the top right of the page, then click **User Profile**.

In the left-hand side menu, select **Security**. Click **Update** in the Multi-Factor Authentication type you would like to disable.

Click **Remove** in the pop-up window to confirm.

The Multi-Factor Authentication section for that MFA type will now show as **Inactive**. If you have multiple types of MFA enabled, you will need to disable each type individually.
